

DECISION INTELLIGENCE

Explore what's possible.

**Quantitative models and simulation
for decisions under uncertainty.**

Floquanta builds simplified mathematical representations of complex business systems to explore possible futures and understand the consequences of decisions.

**We don't model everything.
We model what matters.**

OUR APPROACH

Complex systems. Simplified models.

A useful model does not need to reproduce an entire organization. It needs to capture the variables, relationships and uncertainties that matter to the decision.

01 FRAME

Start with the decision, not the model.

02 SIMPLIFY

Identify the smallest useful representation.

03 SIMULATE

Propagate uncertainty through thousands of futures.

04 EXPLORE

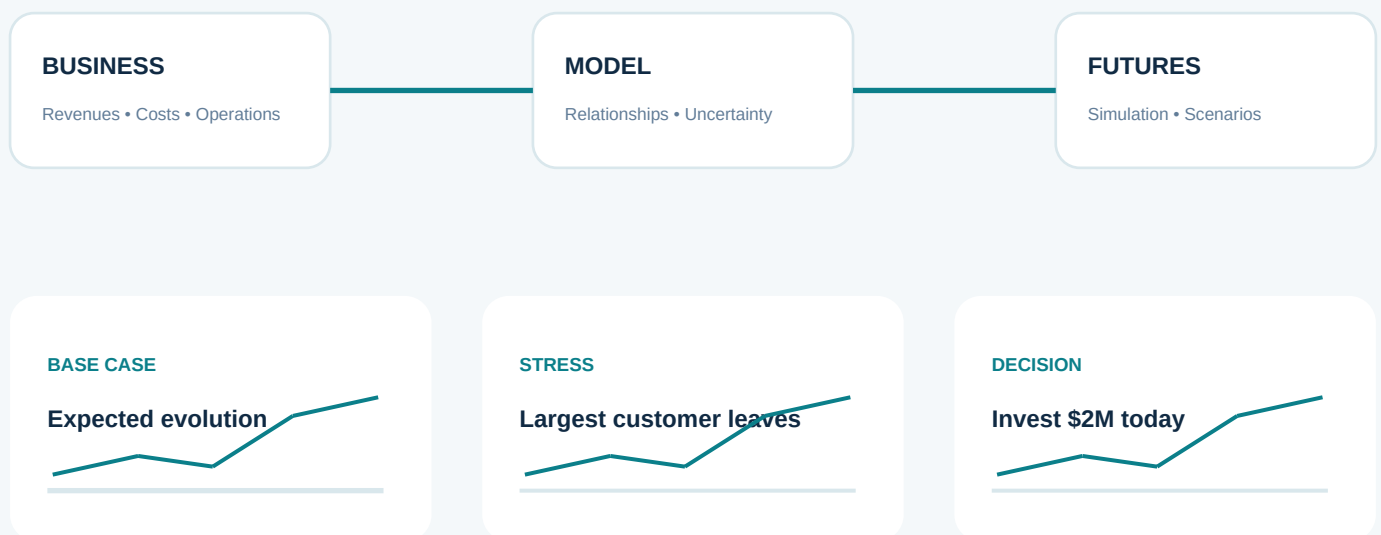

Compare scenarios and understand consequences.

Model only what matters to the decision.

DECISION TWINS

A lightweight quantitative representation of your business.

Connect financial, operational and risk variables in a parsimonious model designed around a specific question.

Not a massive digital twin.

A focused model built to answer the question that matters now.

CAPABILITIES

From uncertainty to insight.

● Quantitative Modeling

Simplified mathematical representations of complex business systems.

● Simulation & Scenario Analysis

Explore possible futures and compare alternative decisions.

● Dynamic Financial Analysis

Connect operational, financial and risk drivers dynamically.

● Risk & Uncertainty Modeling

Model variability, dependencies and tail outcomes.

● Decision Twins

Focused digital representations designed around a decision.

● Applied AI & Analytics

Use AI where it improves modeling, exploration or interpretation.

APPLICATIONS

Questions worth modeling.

Floquanta can start with a financial question and expand only as far as the decision requires.

What if our largest customer leaves?

What if costs rise faster than revenue?

Can we afford this investment now?

How resilient is our liquidity under stress?

Which uncertainties actually drive our outcome?

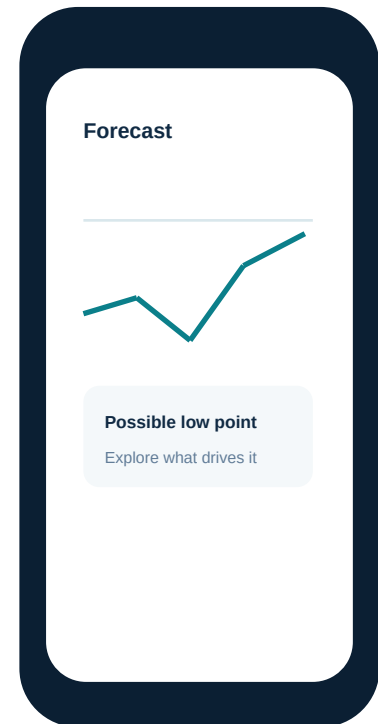

What changes if we choose scenario B instead of A?

Financial • Operational • Risk • Strategic

FLOQUANTA PERSONAL

The same philosophy, made personal.

Floquanta Personal is a free consumer application that demonstrates the Floquanta approach: start with a plan, explore scenarios, and understand possible financial futures.

Have a decision worth exploring?

Let's build the simplest useful model around it.
